

## MTSAT-1R Imaging and Dissemination Schedule

## Note

- This timetable is effective after 0230UTC on 01 July 2010.
- For updated information on dissemination timetable, please refer to MANAM disseminated via MTSAT-1R or available at our web site.

### Via MTSAT-1R

HRIT: MANAM is sent along with imagery of N02 and N08  
 (shown as "N02" or "N08" on a sky-blue ground in the timetable)

LRIT: MANAM is sent along with imagery of PS-N02 and PS-N08  
 (shown as "PS-N02" or "PS-N08" on a green ground in the timetable)

### Web site:

### Legend

	Observation (full-disk/half-disk)		HRIT		LRIT
--	-----------------------------------	--	------	--	------

### Abbreviations

hh: hours in UTC

### 1. Observation

Observation	Abbreviations	Explanation for symbols
1. Hourly full disk	Fhh	F: hourly Full-disk observation
2. Hourly North Half disk	Nhh	N: hourly Northern Hemisphere observation
3. Special Observations for Wind extraction	NhhW Shh ShhW	W: for Wind extraction, S: Southern Hemisphere observation Every 6 hours (00, 06, 12, 18UTC), two Northern-Hemisphere and two Southern-Hemisphere observations will be performed before and after the full-disk observation respectively. For example, observations for wind extraction at about 12UTC are N11, N11W, F12, S12 and S12W.

### 2. HRIT Dissemination

Observation	Abbreviations	Explanation for symbols
1. Hourly Full disk	Fhh	F: hourly Full-disk observation
2. Hourly North Half disk	Nhh	N: hourly Northern Hemisphere observation
3. Special Observations for wind extraction	NhhW Shh ShhW	W: for Wind extraction, S: Southern Hemisphere observation Every 6 hours (00, 06, 12, 18UTC), two Northern-Hemisphere and two Southern-Hemisphere observations will be performed before and after the full-disk observation respectively. For example, observations for wind extraction at about 12UTC are N11, N11W, F12, S12 and S12W.

### 3. LRIT Dissemination

Observation	Abbreviations	Explanation for symbols
1. Full disk	D1-Fhh	Infrared-ch1, Full disk (Hourly)
	D3-Fhh	Infrared-ch3, Full disk (Vapor water channel) (6 hourly ; 00 , 06 , 12 , 18 UTC)
	D0-Fhh	Visible, Full disk (Hourly)
2. Polar-stereographic	PS-Fhh	There are three different polar-stereographic imagery covering: East Asia, the Northeast of Japan, and the Southwest of Japan, See Table 1 for the detailed dissemination plan.
	PS-Nhh	

### 4. Observation channels of MTSAT

Channel	Wavelength
Infrared	ch1      10.3 - 11.3 $\mu\text{m}$
	ch2      11.5 - 12.5 $\mu\text{m}$
	ch3      6.5 - 7.0 $\mu\text{m}$
	ch4      3.5 - 4.0 $\mu\text{m}$
Visible	0.55 - 0.90 $\mu\text{m}$

Table 1 LRIT dissemination plan

Region \ Observation	Polar-stereographic projection ( <b>PS-Fhh / PS-Nhh</b> )						Full disk		
	East Asia Visible	East Asia Infrared- ch1	East Asia Infrared- ch3	East Asia Infrared- ch4	The northeast of Japan Visible	The southwest of Japan Visible	Infrared-ch1 ( <b>D1-Fhh</b> )	Infrared-ch3 ( <b>D3-Fhh</b> )	Visible ( <b>D0-Fhh</b> )
F00	D	D	D		D	D	D	D	D

N23	D	D	D	D	D	D			

D: Dissemination

(D): Visible images will be disseminated when the days are long enough, while infrared-ch4 images will be disseminated when days are short enough. See MANAM for updated information.
