4. Summary

# Asia Pacific Economy Cooperation (APEC)

To meet the Bogor Goals of free and open trade and investment in the Asia-Pacific region

- Trade and Investment Liberalisation
- Business Facilitation
- Economic and Technical Cooperation

# History

1998	Oct.	Proposed APCN : 3 <sup>rd</sup> APEC S&T Ministers' Meeting
1999	Aug.	Approved APCN : 17 <sup>th</sup> APEC ISTWG Meeting
		...
2003	Jan.	Established at the Korea Meteorological Administration
2004	Mar.	Proposed the establishment of APCC : 4 <sup>th</sup> APEC S&T Minister's Meeting
	Sep.	Supported the establishment of APCC : 27 <sup>th</sup> APEC ISTWG Meeting
2005	Mar.	Endorsed the establishment of APCC : 1 <sup>st</sup> APEC Senior Official's Meeting
	Nov.	Welcomed the establishment of APCC : 17 <sup>th</sup> APEC Ministerial Meeting
		Opening Ceremony : 13 <sup>th</sup> APEC Economic Leader's Meeting

## Goals of APCC

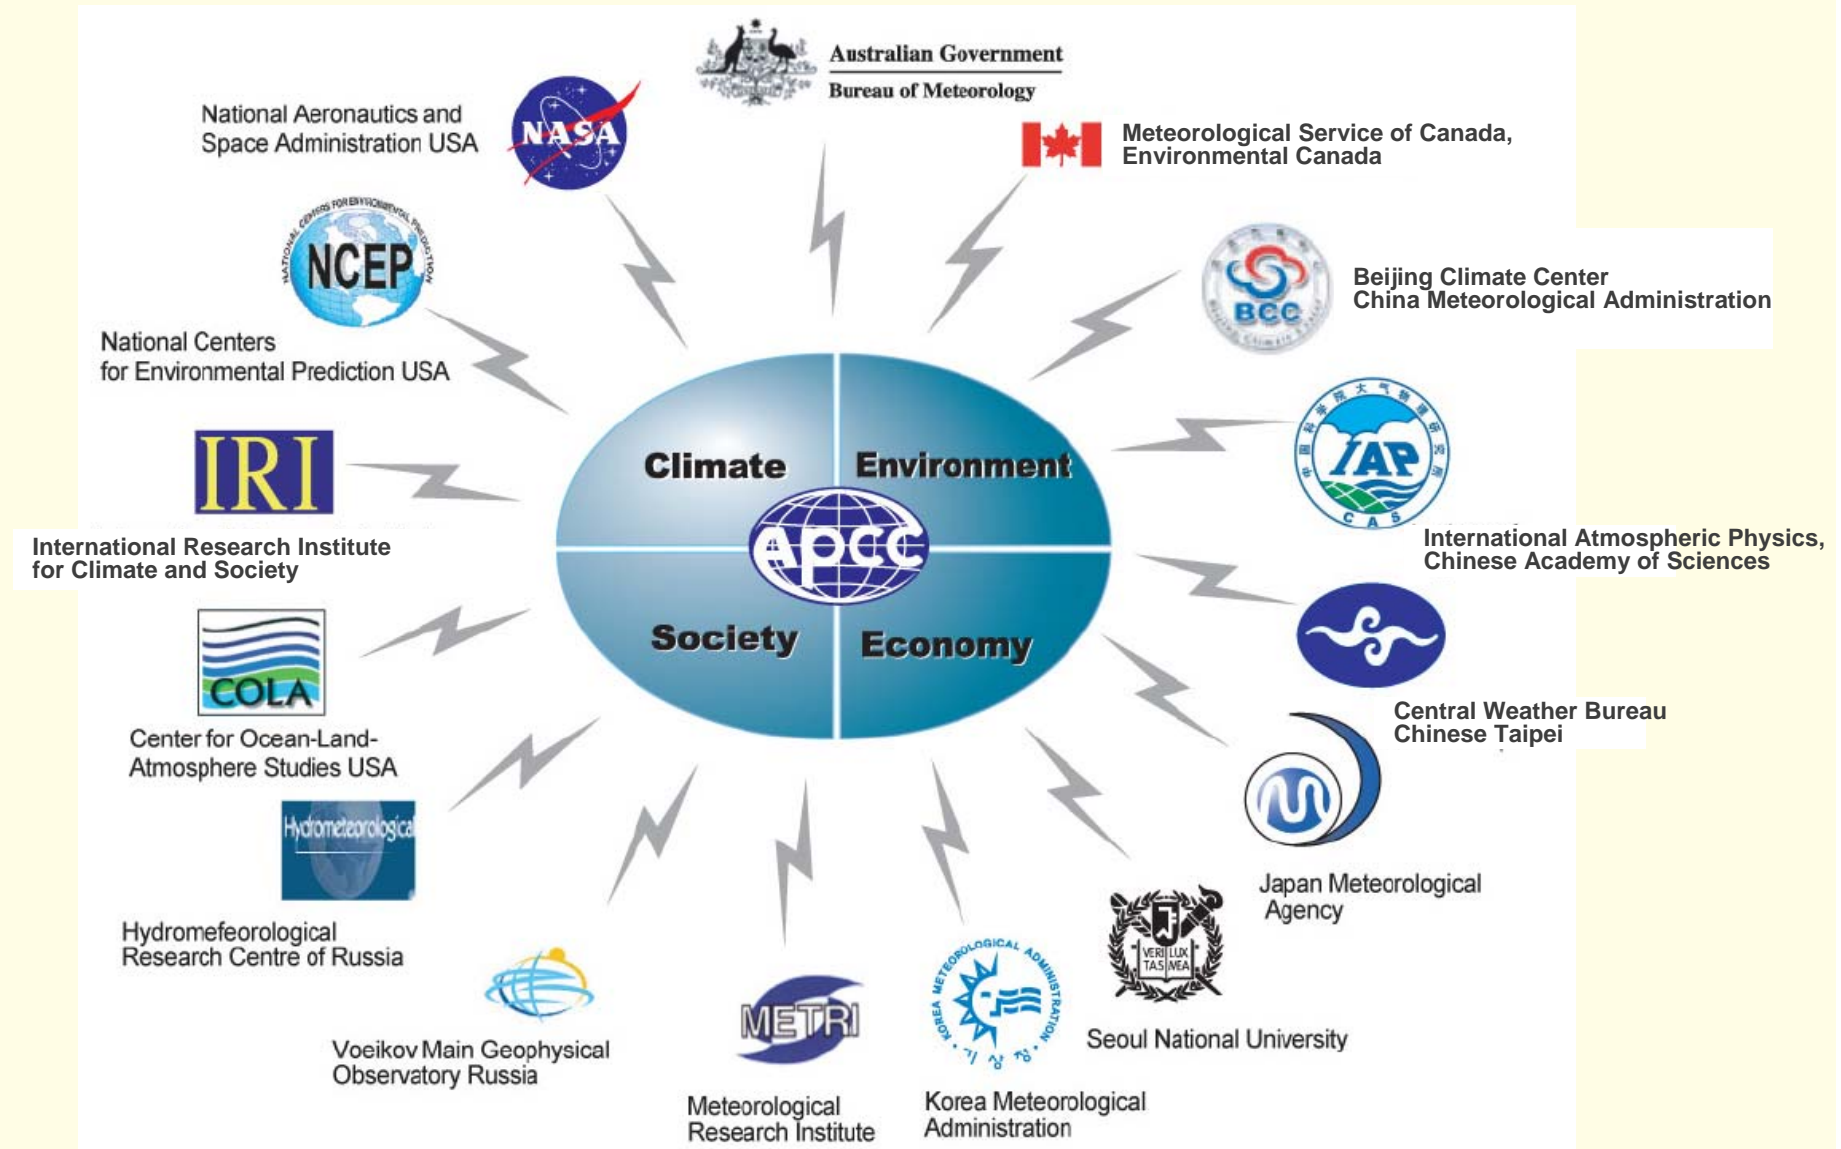

- Facilitating the share of high-cost climate data and information
- Capacity building in prediction and sustainable social and economic applications of climate information
- Accelerating and extending socio-economic innovation

## Functions of APCC

- Developing a value-added reliable climate prediction system
- Acting as a center for climate data and related information
- Coordinating research toward the development of an APEC integrated climate-environment-socio-economic system model

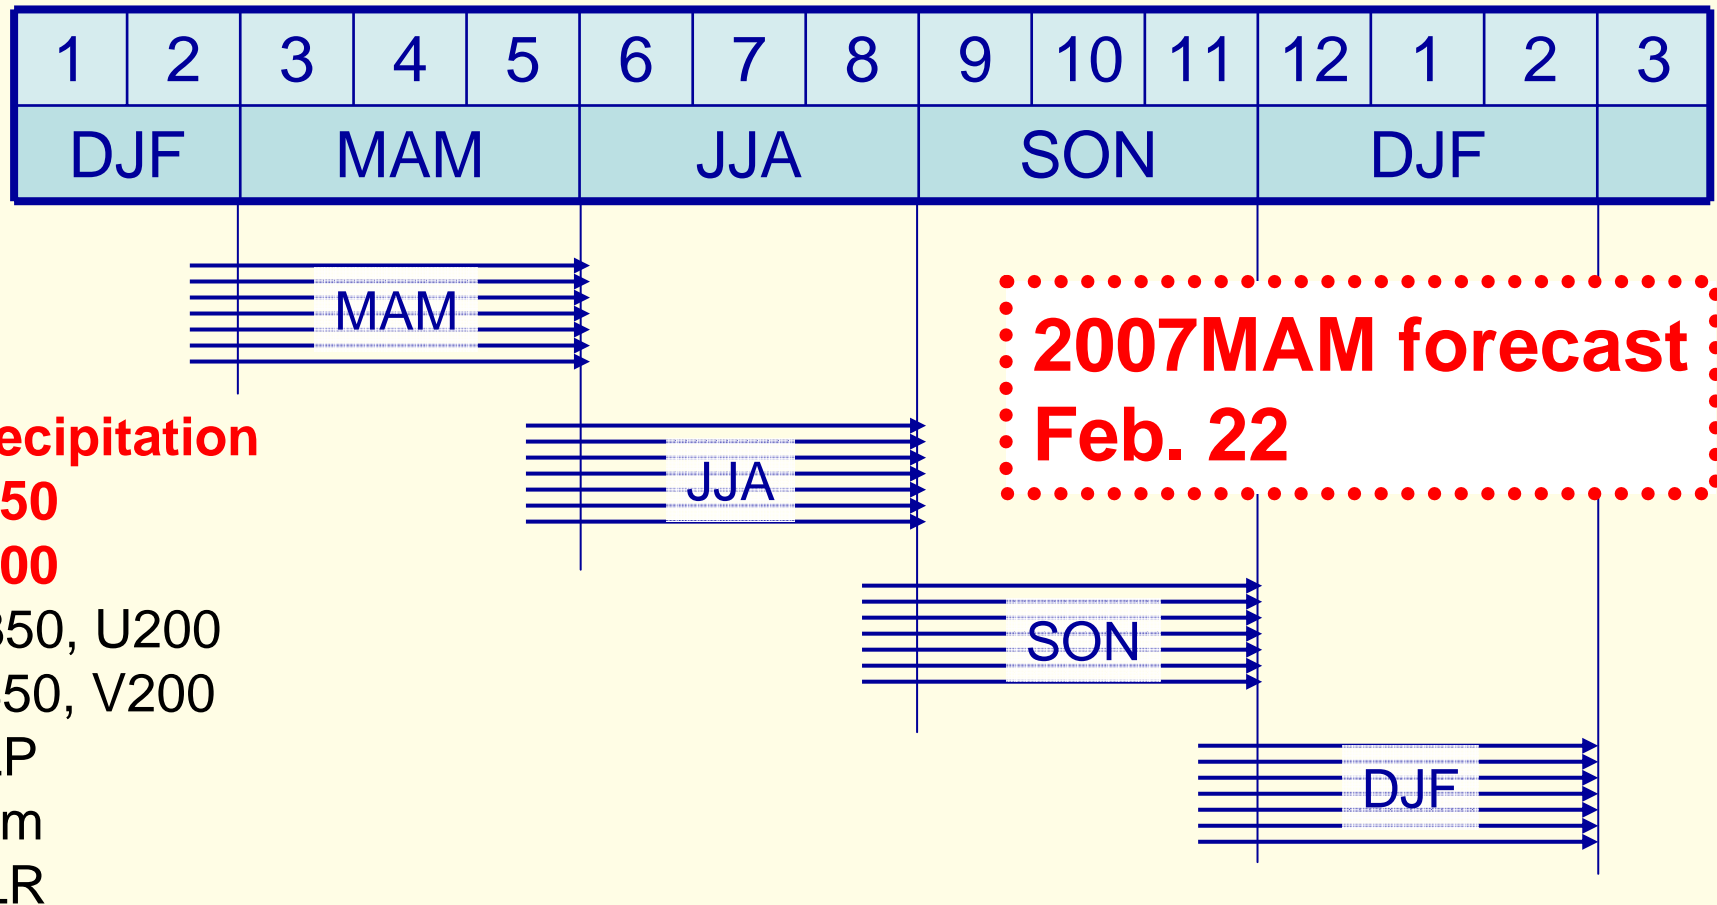

# Multi-Institutional cooperation

***Seasonal forecast  
based on  
Multi-Model Ensemble  
(MME)***

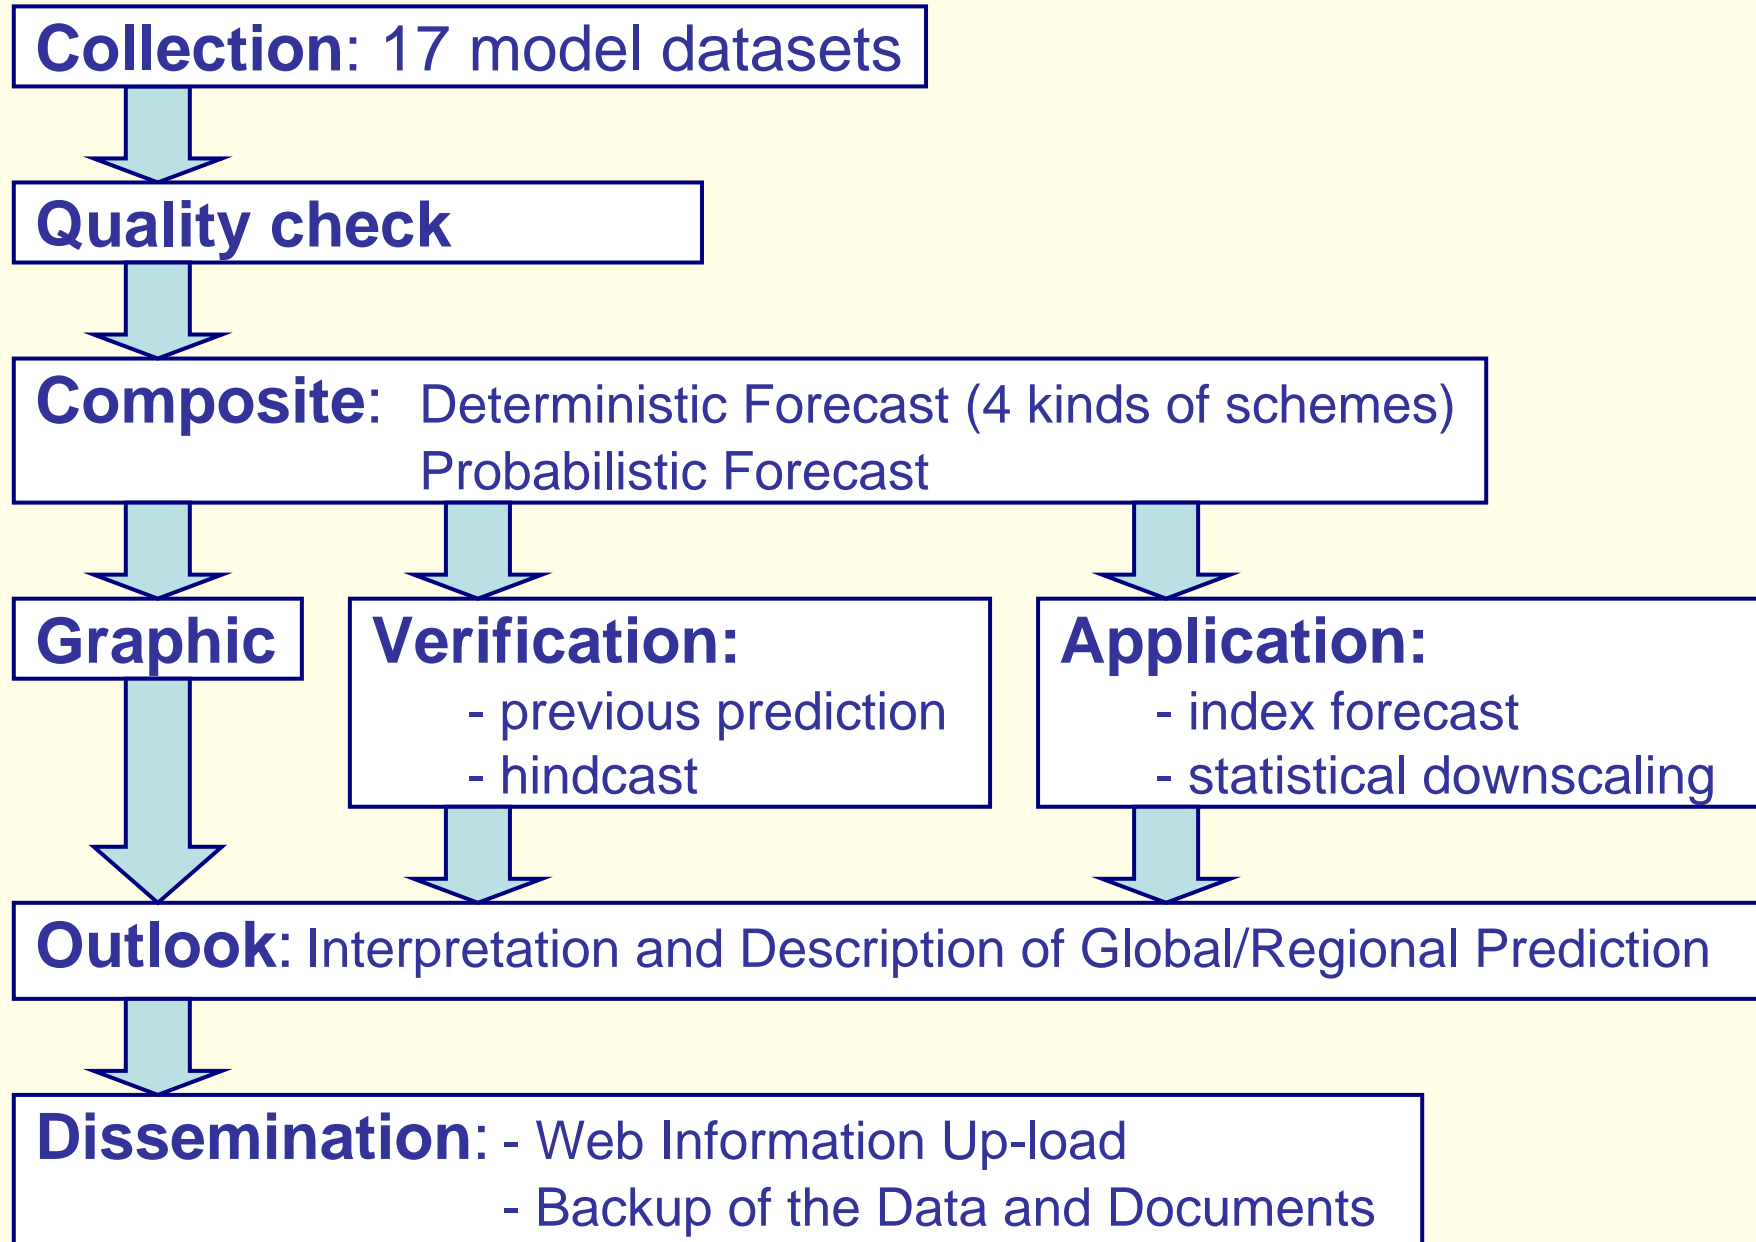

# Schedule of APCC seasonal forecast

APCC provides 3 month forecast in each season.

# Procedure of seasonal forecast

# APCC Participating Models

Member Economies	Acronym	Organization	Model Resolution
Australia	POAMA	Bureau of Meteorology Research Centre	T47L17
Canada	MSC	Meteorological Service of Canada	1.875 ° × 1.875 ° L50
China	NCC	National Climate Center/CMA	T63L16
	IAP	Institute of Atmospheric Physics	4 ° × 5 ° L2
Chinese Taipei	CWB	Central Weather Bureau	T42L18
Japan	JMA	Japan Meteorological Agency	T63L40
Korea	GDAPS/KMA	Korea Meteorological Administration	T106L21
	GCPS/SNU	Seoul National University	T63L21
	METRI/KMA	Meteorological Research Institute	4 ° × 5 ° L17
Russia	MGO	Main Geophysical Observatory	T42L14
	HMC	Hydrometeorological Centre of Russia	1.12 ° × 1.4 ° L28
USA	IRI	International Research Institute	T42L19
	COLA	Center for Ocean-Land-Atmosphere Studies	T63L18
	NCEP	NCEP Coupled Forecast System	T62L64
	NSIPP/NASA	National Aeronautics and Space Administration	2 ° × 2.5 ° L34

# APCC Deterministic MME Schemes

**1. SCM:** Simple composite of individual forecast with equal weighting.

$$P = \frac{1}{M} \sum_i F_i'$$

**2. CPP – Coupled Pattern Projection Method :**  
Simple composite of individual forecasts, after correction by statistical downscaling using CPPM

$$P = \frac{1}{M} \sum_i \hat{F}_i'$$

**3. MRG – Multiple Regression:**

Optimally weighted composite of individual forecasts. The weighting coefficient is obtained by SVD based regression.

$$P = \sum_i a_i F_i'$$

**4. SSE – Synthetic Multi-Model Super Ensemble:**

Weighted combination of statistically corrected multi model output

$$P = \frac{1}{M} \sum_i \alpha_i \hat{F}_i'$$

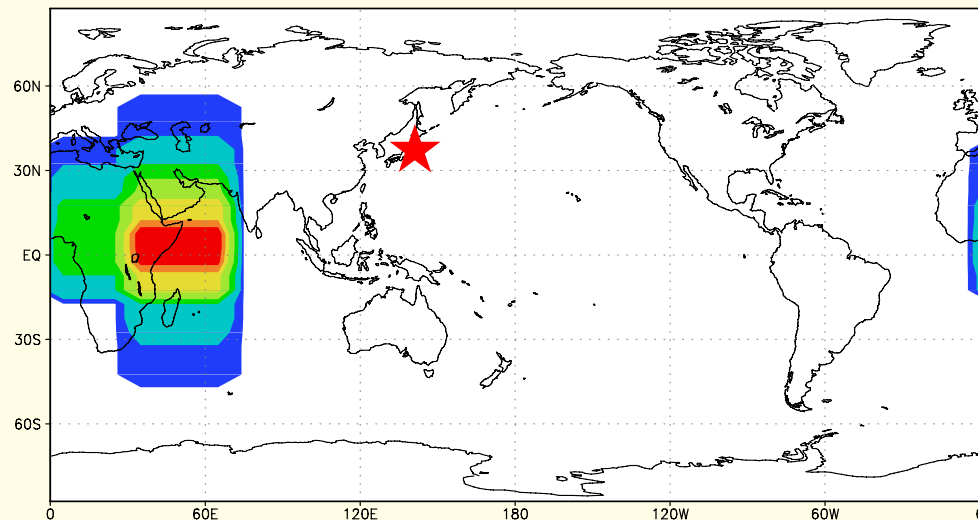

# APCC Deterministic MME Schemes

## 2. CPP – Coupled Pattern Projection Method :

Simple composite of individual forecasts, after correction by statistical downscaling using CPPM

1. determination of spatial pattern which is related to the target region.
2. calculation of regression coefficient in training period.
3. composition of all models

# APCC Deterministic MME Schemes

## 3. MRG – Multiple Regression:

Optimally weighted composite of individual forecasts.  
The weighting coefficient is obtained by SVD based regression.

# APCC Deterministic MME Schemes

## 4. SSE – Synthetic Multi-Model Super Ensemble:

Weighted combination of statistically corrected multi model output

# ***Verification for Seasonal Forecast***

# Verification of Deterministic MME (model performance)

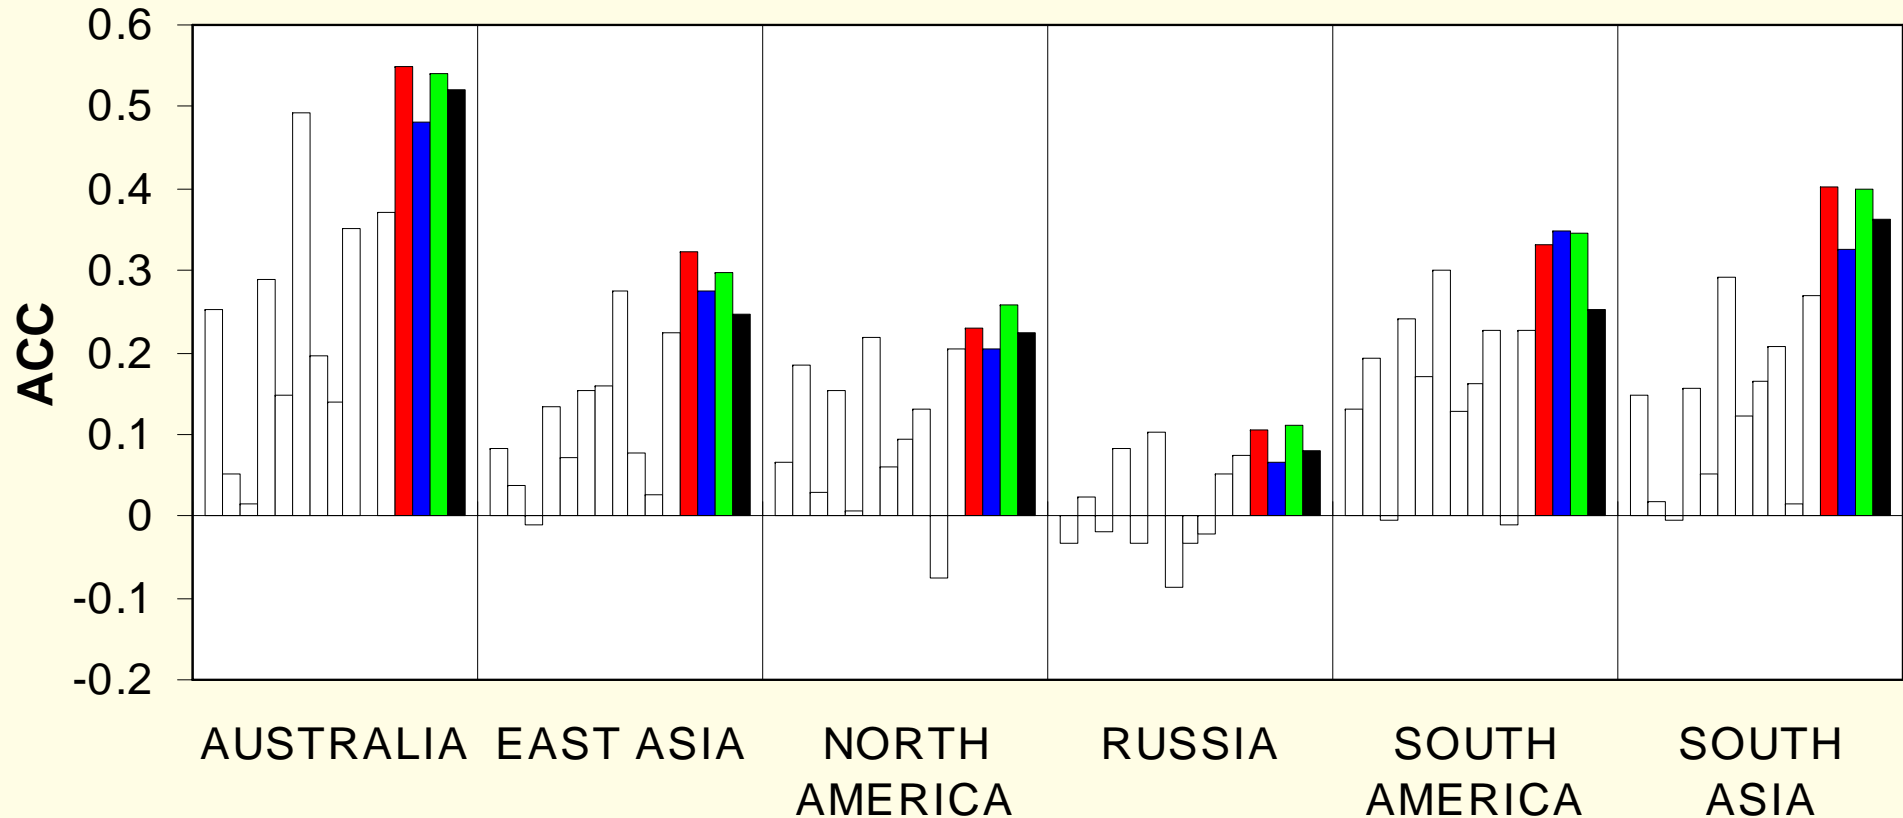

Taylor Diagram : 1983~2003, JJA Hindcast

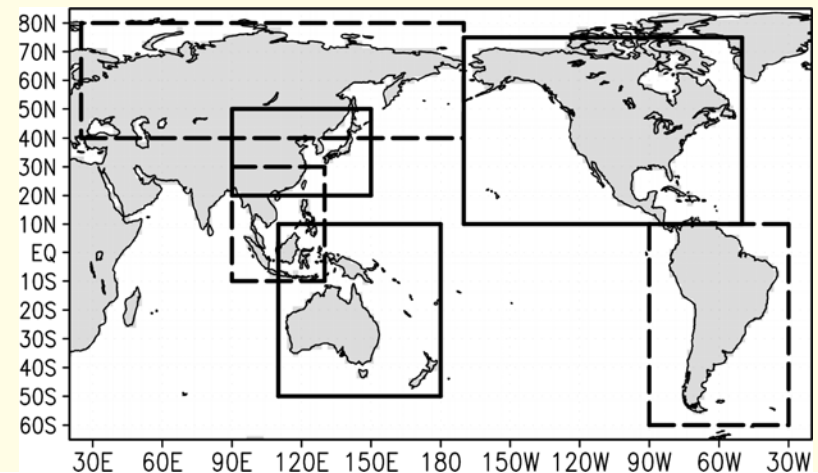

# Verification of Deterministic MME (spatial distribution of MSSS)

# Verification of Deterministic MME (regionality)

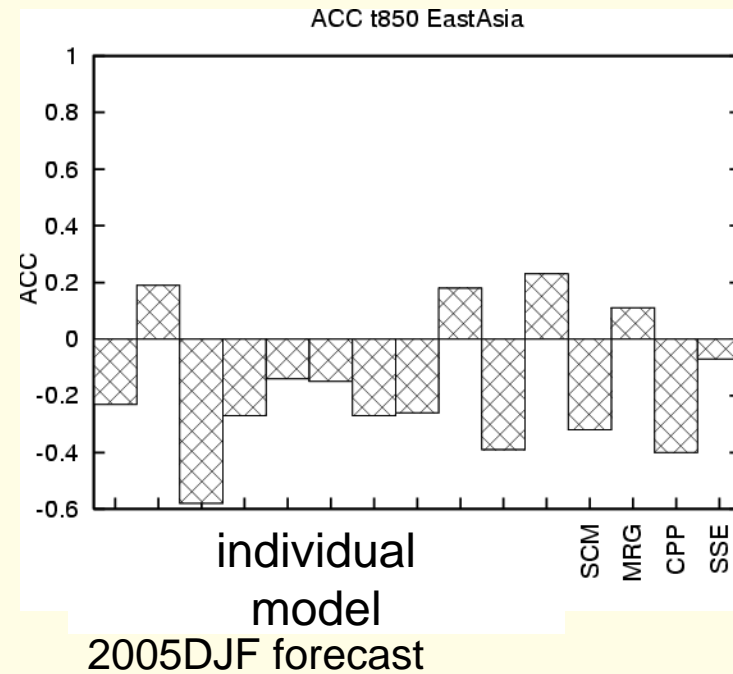

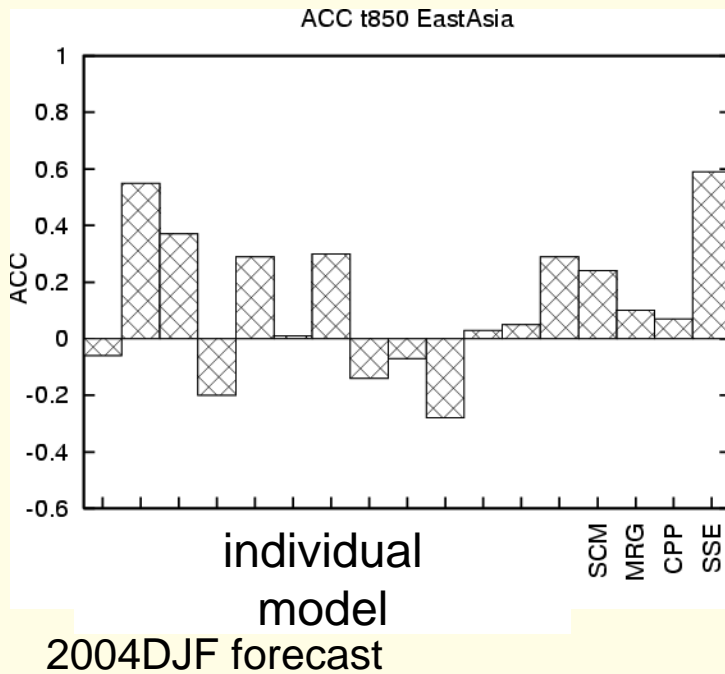

Anomaly Correlation Coefficient for hindcast in each region (precipitation, JJA, 1983-2003)

# Verification of Deterministic MME (ACC skill score)

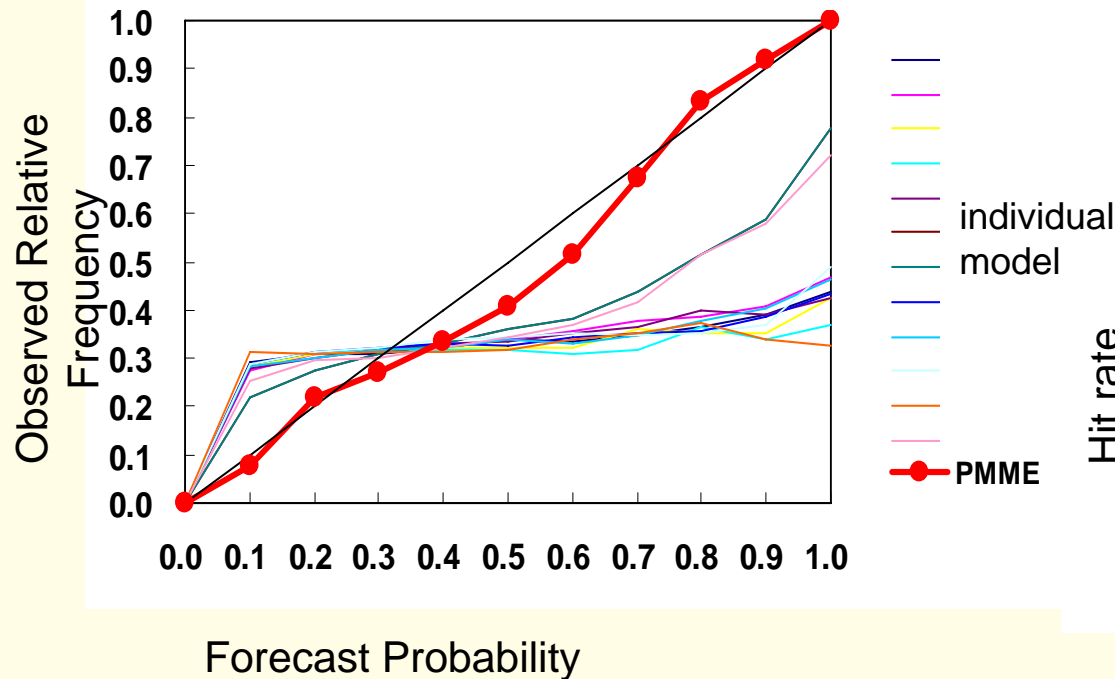

ACC Temperature 850hPa Hindcast (DJF, EAST ASIA)

# Verification of Probabilistic MME

## Globe, Above-Normal, Precipitation

### Reliability Diagram

### ROC Curve

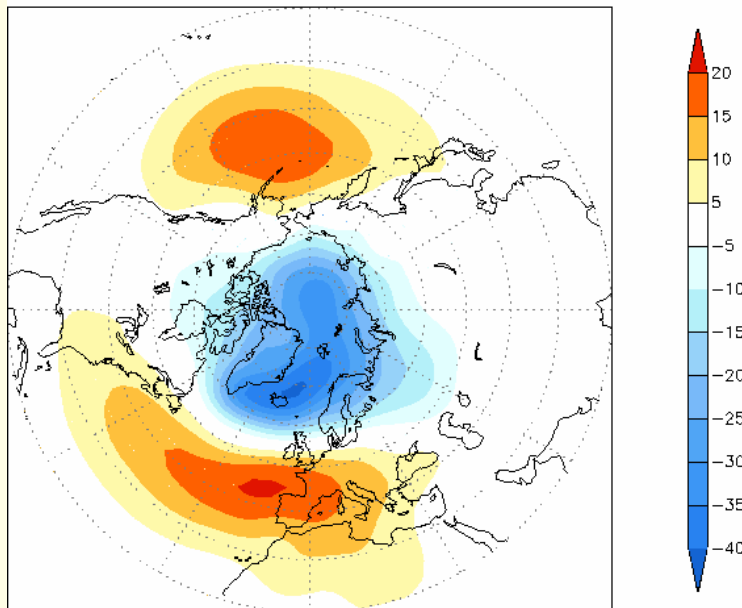

Forecast skill of probabilistic multi-model ensemble is better than that of individual model.

***Application using  
APCC prediction***

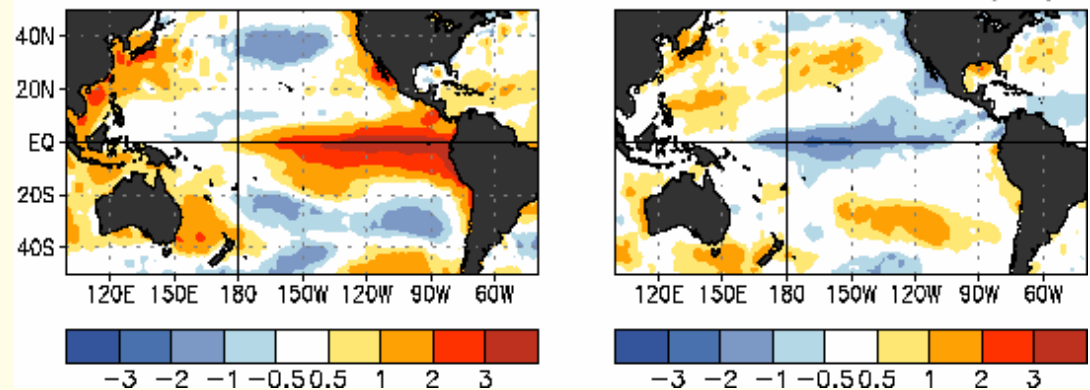

# Application using APCC prediction

- Statistical downscaling using MME prediction
  - Thailand, Philippine, China
- Index forecast
  - El Nino, PNA, AO, NAO, Monsoon

Leading EOF (19%) shown as regression map of 1000mb height (m)

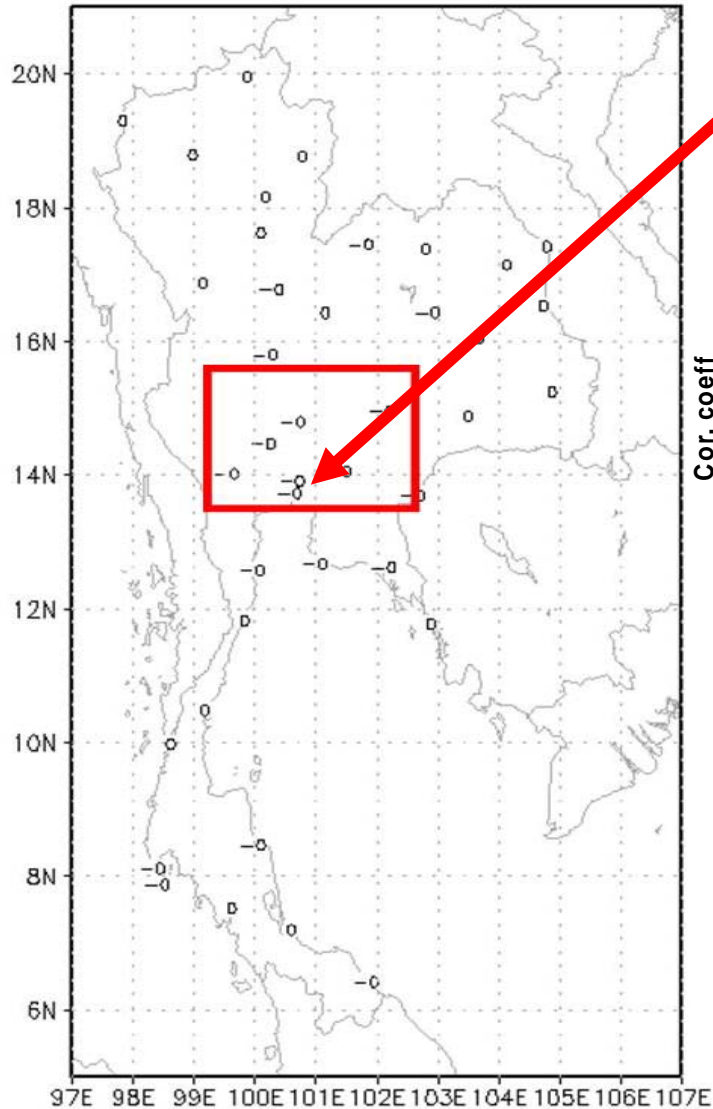

OCEAN TEMPERATURE DEPARTURES (°C)

RM2	Oct 2006	-0.005	▪	↔	▪	↔
AUSMI	Oct 2006	-1.228	▼	↓	▪	↔

\* **Tendency** : rate of change over the period indicated to latest values (dx/dt)

- ▲ strongly positive ( $1 < dx/dt$ )
- ▲ weakly positive ( $0.3 < dx/dt < 1$ )
- ↔ neutral ( $-0.3 < dx/dt < 0.3$ )
- ▼ weakly negative ( $-1 < dx/dt < 0.3$ )
- ▼ strongly negative ( $dx/dt < -1$ )

## Surface Ocean Indices

Index	Updated	Latest monthly value	Latest 3-mo mean value	Latest 3-mo tendency	Latest 1-yr mean value	Latest 1-yr tendency
NINO	Oct 2006	-1.047	▲	↔	▪	↔
NINO3.4	Oct 2006	-0.205	▲	↔	▪	↔
DMI	Oct 2006	-1.310	▲	▲	▲	▲

## Summary

- APCC is established in 2005 Nov in Busan Korea supported by APEC countries in order to reduce economic loss by climate.
- APCC provides 4 kinds of deterministic forecast and one probabilistic forecast. After the verification, we choose the best deterministic forecast.
- Forecast skill of deterministic MME schemes is better than that of individual model.
- Forecast skill over the land is worse than over the ocean.
- APCC has been developing statistical downscaling. The downscaling can improve forecast skill.
- APCC has been developing index forecast.

*Thank you*
