

## Methane Reference Gas Intercomparison for Japan from 2015 to 2016 Technical Details on Laboratory Measurements

### **Meteorological Research Institute (MRI)**

#### *1. Information on contributors*

- (1) Contributors: Dr. Hidekazu MATSUEDA
- (2) Organization: Meteorological Research Institute

#### *2. Information on instrument*

- (1) Analytical method: Cavity Ring Down Spectroscopy
- (2) Manufacturer: Picarro
- (3) Model: G2301

#### *3. Information on sampling*

- (1) Flow rate: 100ml/min

#### *4. Information on measuring*

- (1) One measurement: 10 min continuous sampling (discard first 9 minutes data)/per measurement
- (2) Mole fractions: average values of the last one minute data

#### *5. Information on standard gas*

- (1) Number of standard gases: 5
- (2) Mole fraction of standard gases: 1598.7, 1724.2, 1850.5, 1975.6, 2102.1 ppb
- (3) Diluent gas: Purified air
- (4) Scale: MRI Scale

#### *6. Other information (references, papers, literatures, etc.)*

Matsueda, H., Y. Sawa, A. Wada, H.Y. Inoue, K. Suda, Y. Hirano, K. Tsuboi and S. Nishioka, Methane standard gases for atmospheric measurements at the MRI and JMA and intercomparison experiments, Papers in Meteorology and Geophysics, 54, 91-109, 2004.
